Here you can change the Exposure, Highlights and Shadows controls. For example, by switching the mode setting from Highlights to Sharpen, you'll see that the image displays with a grainy effect, a little like the effect you see when using a grainy film in your camera when you use the Creative Auto mode. Like Sharpen, however, you'll also find that this shows you details much more clearly. If you want to brighten shadows, clicks on Image ▶ Adjustments ▶ Brightness/Contrast.
