* **Tools**. In the Tools panel, you can change the way that Photoshop works in a way similar to using the tool options in PowerPoint. These tools let you change the appearance of your image without necessarily changing what you're doing. You can apply special effects or filters, change the contrast, change the levels, and so on. These tools are extremely powerful and are far beyond what is covered in this book. * **Layers**. This panel shows where a selection has been made (such as a retouching tool) and where a channel has been created (such as exposure, brightness, and so on). You can see the Tools and other panels while this panel is visible. You may be able to see your image here in the Layers panel, even though it may be obscured if it's not visible. The top left-hand corner of the Layers panel displays the name of the current image you're working on, and you can scroll through previous images using the side arrows. You can change the contents of a layer by selecting the layer and then dragging it to another area on the image, similar to the standard Windows cut-and-paste tool. You can also create a new layer simply by dragging the layer icon to a new location on the image. It's even possible to have a layer automatically create a new layer when you make a new selection on the image. You may see the new layer name displayed in the layer pane. You can merge several layers into one layer. But you can't merge a visible layer with an invisible layer; Photoshop merges them automatically. Merging layers is a useful step when you want to combine two or more similar images on the same image. For example, you can make a screenshot appear to be a painting if you merge a photo of a computer screen and a photo of a painting on the computer screen. (See the Save Options window for more information on merging different types of layers. The tutorial is on Creating a Painting Out of a Screen Shot.")

1. Importing a New File In the best way we can think of, you can import a new file into Photoshop Elements using the New Document dialog box. In the dialog box, you select the file by dragging and dropping the item onto the dialog window, then you provide a name for the new file and change the item's position if needed. You can also import a file using the sidebar directly.
2. Cropping to an Exact Size Select the file you want to edit, then press the C key on the keyboard to make a rectangle selection from the current layer. Now right-click on the selection and choose the crop command to select and crop the entire canvas. Now select the crop tool from the tool palette and click anywhere inside the cropped area to lock the selection.
3. Resizing and Resaving Your File Select the image you want to edit, then use the Layout tool on the tool palette to adjust the size of the image. Press the W key on the keyboard to access the Image Size dialog box. You can change the resolution of an image by setting it to a high-resolution. You can save the image as a new file, but to save your current file, press the S key.
4. Resaving Images If you have a lot of images, let's save the disk space! Make a Smart Object of the file you want to edit, then press the S key on the keyboard.
5. Making the Layers Visible You can see the layers of the image you want to edit on the Layers palette. To make the layers visible, press the eye icon next to the layers name in the Layers palette. You can also make layers invisible by pressing the eye icon next to the layers name.
6. Making the Selection Black and White When you are selecting the area of the image you want to edit and make it black and white, you can make the selection easy. First, make sure that the entire layer is selected. Now use the Select menu and select Color Range. The Color Range dialog box will appear. Next, drag the left and right arrows to deselect the color of the area you want to make black and white 05a79cecff

After a dismal home loss to The Citadel last week, Chattanooga's wrestling team is hoping to turn things around on the road this week. The Mocs (4-4) will face Murray State (2-5) at Murray, Ky. on Friday night before traveling to Knoxville to face Tennessee Tech (2-5) on Saturday morning. The Mocs have held their own in duals this season, improving to 3-4. Murray is coming off a 28-16 loss to Army last week in which it was outscored 17-1 in the third period. Tennessee Tech is coming off an overtime loss to UT Martin in which they were outscored 9-3 in the third period. Chattanooga: Jon Wolf (Eerie, N.Y./Penfield) – 152 Wolf is a two-time All-OAC Wrestler of the Week Award winner. He defeated three ranked wrestlers during the regular season. During the season, Wolf led the Mocs to an 11-match win streak and won the OAC Championships. At the NCAA's, he won All-Ohio Valley First Team, All-America First Team and beat 2nd-ranked Will Kubiak of Ohio State. Wrestling Strategies: "We have to get after them physically. We can't let them turn the ball over and we have to keep grinding out on the offensive end. As a team, we are going to have to play strong and continue to go for the takedown. "We have to keep the pressure going and execute the offense. Most important is to focus on every point and get a takedown. "I don't care about rankings, I just want to go out there and execute." Murray: "We're disappointed in the way that we lost last week. I know that we lost on purpose and I thought that we kind of handled it all right. We'll have to rebound better because they are a team that is coming off a loss. We're trying to get our confidence back." Tennessee Tech: "I think we are making strides. We are learning to play with some confidence." Murray State Murray State's head coach Alan Huber is in his first season at the school after taking the same position at Illinois State earlier in the season. Huber is in his third season at the school. In the first two seasons, he was the head coach at
